Stopwatch 2019 Crack Category:Evaluation software Category:Stopwatch Category:Time management software Category:Windows-only softwareQ:  
Rearrange array elements I have an array in the form of the array below myarray = [{"name", "john"}, {"age", 10}, {"weight", 120}, {"height", 8.5}]  
And I want to use the function sort() to sort it by the length of the array. So the result would be myarray = [{"age", 10}, {"height", 8.5}, {"weight",  
120}, {"name", "john"}] How can I do this? A: This is called a transposition: > sapply(myarray, function(x) sort(length(x))) age height weight name 10  
8.5 120 john 1 8.5 120 john 1 8.5 120 john 1 8.5 120 john 1 8.5 120 john 1 8.5 120 john 1 8.5 120 john 1 8.5 120 john 1
